

RIGHT-ON Spray

Application liquid for self-adhesive films and paint protective films.

Information:

Dries faster than water and soap. Repositioning possible without air-bubbles and wrinkles. This fluid combines the advantages of wet application with the fast adhesion of self-adhesive films and tapes.

Instructions:

Spray the adhesive side and the substrate with RIGHT-ON Spray and apply the object on the substrate. Attach the film to the surface and spray the front of the film slightly with RIGHT-ON, so that the squeegee slides smoothly over the surface. Start in the middle and squeeze to the edges. Air bubbles will be removed in this way. The bonding process will start in less than three minutes. Can be diluted with water to slow down the bonding process.
